TERMS OF SALE PLEASE READ CAREFULLY BEFORE ORDERING

(This cancels all Previous Catalogs and Quotations)

QUOTATIONS. All prices quoted in this catalog are for ROOTED CUTTINGS on both Carnation and Chrysanthemum plants and are all F.O.B. San Gabriel, California. Remittance must accompany all mail orders with adequate postage included. No C.O.D. order is accepted. 4% sales tax must be added to all shipments made within the State of California.

MINIMUM ORDER. Three dollars plus postage.

LARGE ORDERS PREPAID. Postage on all RETAIL orders \$15.00 and above will be prepaid by us—via Air parcel beyond the 4th zone and parcel post to zones 1, 2, and 3. (In the United States only).

ACKNOWLEDGMENT OF ORDERS. Unless we are able to fill orders immediately, we send acknowledgments within a few days after receipt of order. If you do not hear from us within reasonable time, please write us.

TIME OF SHIPMENT. We fill orders for Chrysanthemums from about MARCH 15 through May, June, and July 15. CARNATIONS are shipped between February and September.

HOW ORDERS ARE FILED. All orders will receive our careful attention. Although we always endeavor to fill the orders on or at least near the date requested on the "Order Sheet," we appreciate early orders. In general, we follow the rotation procedure.

SUBSTITUTIONS. In case stock of certain varieties is exhausted, we will substitute with correctly labeled plants of similar type, color, and blooming date as good or better without additional cost unless the order is marked "NO SUBSTITUTION."

SHIPPING INFORMATION. Shipping instructions should be indicated on all orders. Orders are shipped via Parcel Post or Air Parcel Post. Our experience of past seasons clearly indicate that AIR PARCEL POST is the best

Introductions

FROM

SUNNYSLOPE GARDENS

SAN GABRIEL, CALIFORNIA

DREAM CASTLE

(Cat. No. 947) A greatly improved "Thomas W. Pockett" adequately describes this handsome and pleasing rosy pink, loosely incurving mammoth Exhibition flower. The stem is extra bold and rigid. Foliage is extra luxuriant. October 25.

TRANQUIL MOON

(Cat. No. 964) As serene and majestic as the full moon in the clear autumn sky, this loosely incurving broad petaled flower of "Louisa Pockett" shape and size towers proudly among others. Color is white overcast with soft cream. Tall grower. November 1.

CENTURY

(Cat. No. 942) Here is a completely new color in an incurving exhibition flower. It is a superb blending of rich orange and buff tones. Flower texture is extremely solid and exceedingly long lasting. Short growing habit with rigid stem. October 25.

COTTON QUEEN

(Cat. No. 945) Pure white. As stately and regal as a chosen queen, this flower captivates attention anywhere. Its perfect form, giant size bloom, and superb growing habit are a few of the desired characteristics of this wonderful and beautiful flower. Tall. November 1.

GOLDEN SYMPHONY

(Cat. No. 952) Rich golden yellow of solid petal substance which is tubulated in formation. A vigorous and splendid grower. Best in this class. October 25.

HARMONY

(Cat. No. 953) Another addition in deep rosy purple incurve exhibition type of great merit. Superb grower of quality blooms. October 20.

BRONZE PRINCE

(Cat. No. 939) Out of the many bronzy-toned Exhibition type flowers grown and tested for our showing last season, this handsome and pleasing deep bronze incurve flower was most outstanding by greater margin. October 20.

MORE NEW PRIZE WINNING CHRYSANTHEMUMS FOR 1962!

WHITE GODDESS

(Cat. No. 965) Purest white as a fresh fallen snow, the petals are bold and radiate outward from a fully double center, maintaining its shape for a long period, even after being cut and arranged. October 25.

HERITAGE

(Cat. No. 954) Indescribably rich wine red globular flower of solid texture. Top-most in this class. Producer of uniform first quality blooms without noticeable failure with us. Tall grower. November 1.

CORONATION

(Cat. No. 944) Color is a delicate shade of soft pink throughout. A perfectly formed giant and handsome Exhibition flower in every respect. Dramatically globular in formation, this flower represents all exhibitors' dream come true. October 25.

GOLDEN CROWN

(Cat. No. 950) Here is one variety possessing all the desired characteristics of being a great commercial value as cut. Color is vivid yellow. Shape is perfectly globular at maturity. Flower substance is solid. Foliage is medium size and stem is the sturdiest. October 25.

PINK PLUME

(Cat. No. 959) Here is an artist's dream where ultimate expressions in grace of lines are found and complete harmony in symmetry observed. Closer examination reveals nature's infinite handiwork at each petal tip of curls and fishhook. Color is winsome lavender-pink. For thrill and surprise, be sure to grow this. October 25.

DESERT SONG

(Cat. No. 946) As dramatic as the breathtaking spectacle of the desert sunset, this remarkable flower's most intriguing blending of golden, buff, and bronze tones has held our flower show visitors totally spellbound. October 25.

FIRST SNOW

(Cat. No. 948). Dramatic in achievement in that this giant incurve matures early. In full bloom around October 10 without fail with us. No other early whites can equal its performance.

MONTE VISTA

(Cat. No. 958) Solid deep yellow completely globular bloom is borne on sturdiest of stems supported with healthiest foliage imaginable. Bred to achieve this near ultimate in Exhibition flower, it inherits all the best qualities of its parent, the illustrious "Glendale." October 25.

RECENT INTRODUCTIONS

**PRICE: 35 cents each, 3 for \$1.00; 6 for \$1.75
(one name)**

BRONZE CHARM (No. 789). Most satisfactory growing habit of this beautiful bronze cascade ranking as top in this class for our new introduction. It is an anemone type flower blooming in great profusion. Oct. 25.

CHAJIN (No. 716). Old gold anemone type flower with the same old gold cushion center. Gold florets with touch of red neatly surround the disc. Oct. 20.

DIADEM (No. 726). Most floriferous deep rose pink anemone type flowers. Individual flower measures 1½ inches across. Suitable for giant size cascade training as our specimen grew to 6 feet by 8 feet long. Nov. 1.

GREAT RAINBOW (No. 727). The size of this flower and shape is identical to "Diadem," only its color is bright oxblood red. We regard this variety as the most outstanding red cascade introduced by us to date. Nov. 1.

MAIKO (No. 724). A button anemone type of an unusually beautiful Rosy pink throughout. This variety was completely "sold out" of rooted cuttings last planting season. Oct. 25.

MEDALLION (No. 728). A wealth of anemone type pink flowers about 2½ inches across. The cushion is extra large surrounded by a single row or short spoon shaped ray petals. Oct. 25.

MOONBEAM (No. 790). A dazzling yellow anemone type flower about 1 inch in diameter. A welcome addition for late flowering. Nov. 5.

SHIRATSURU (No. 725). Purest white, most floriferous cascade in existence. It is an anemone type with wide spoon ray petals. This was sold as (Ca. 24) during our fall show. Nov. 1.

Cultural Suggestions for Cascades

POTTING MIXTURE. Mix the following thoroughly: 2 parts fibrous loam, 1 part leaf mold, 1 part barnyard manure, 1 part peat moss, 1 part sand, 5 lbs. superphosphate to a cubic yard of soil.

RE-POTTING. When purchased, the plants may be potted in a 6-inch pot. 2 to 3 additional repottings to larger size containers are made at intervals of 4 to 5 weeks apart. Final re-potting is done around August 10 and the size of the container is determined by the amount of growth attained at that time.

TYING AND PINCHING. When the plant is about 12 inches tall, a fairly long 12 gauge leading wire is inserted next to its trunk. (Fig. 2). The wire is then bent at an angle of 45 degrees at the point 6 inches above the soil surface. This position is maintained throughout the growing season. Next, the plant is also bent similarly and tied to the leading wire periodically as the plant grows.

IMPORTANT. All laterals and sub-laterals are stopped at every third or fourth leaf joints until the end of September. When buds begin to show color, the pot is placed on a higher position with the tip of its main leader bent downward together with the original leading wire as in figure 5.

FERTILIZING. A light application of liquid fertilizer is given at 2-week intervals during its entire growing season until buds begin to show color.

Sunnyslope's Magic Mums*

*Sunnyslope Gardens Trademark

PRICE: 75 cents each; 3 for \$2.00 (one name)

MAGIC CARPET (No. 793). Truly sensational variety which has created more attraction and more favorable comments than any one flower on the display. The right specimen was planted in an 8 inch size pot from cutting started in April. Imagine a tree carpeted with mass of brightest "Aureolin yellow" flowers about 1 inch in diameter. Oct. 15.

MAGIC LIGHT (No. 794). Rosy Red. Habit of growth very similar to "MAGIC CARPET." Oct. 25.

MAGIC MOUND (Cat. No. 931). Sunnyslope's proudest 1961 introduction. Magic Carpet X April Showers. Wealth of decorative 1 inch diameter flower in a clear soft yellow. This variety has the vigor of "Magic Carpet" and self branching habit of "April Showers." Oct. 25.

BROWN EYE (Cat. No. 941). Wealth of 1 inch size button pompons of Shell Pink with dark brown center. One of the most vigorous growers. Oct. 25.

MAGIC CHARM (Cat. No. 956). Indescribably rich wine red in color. Extremely floriferous in habit. A must in this type. Oct. 25.

MAGIC DOT (Cat. No. 957). This has attracted great attention during our late Show because of its unusually beautiful combination of colors. A light rose petals are edged vividly with deeper rose markings. The center of flower is rich rose almost red. Nov. 20.

CULTURAL SUGGESTIONS

MAGIC MUMS* (TREE SHAPE)

*Sunnyslope Gardens Trademark

(Pot culture)

Varieties bred with sturdy nodule structure to form a tree shape. Soil mixture, feeding, and general care are very similar to that of "Cascade" culture found elsewhere in this catalog.

When container grown, at the shifting time from 6-inch pot to an 8-inch size, all lower branches to the height of 5-6 inches are pruned off exposing its trunk as shown in the illustration.

Container plants are grown in open area with full sun ex-

posure to stimulate its compact growth. The pots are turned around at intervals to allow even light exposures to all sides.

The tiny tip of each branch is nipped off at every 4th or 5th leaf axil simultaneously with its growth. Since each leaf joint has one branch forming potential, second pinching will allow 16 number of branches; third, to 64 branches; 4th pinching to 256 branches, etc. **IT IS ACTUALLY VERY SIMPLE.**

Sunnyslope's September Blooming Mums

Considerable research has been conducted by universities and agricultural stations in Japan to breed early flowering large mums that will boom anywhere before the approach of frost. We are introducing few of these each year after completing the tests at our Gardens. These varieties have bloomed with us by Sept. 15.

CITATION (No. 866). Beautiful soft pink when weather is cool; otherwise, a purest white. Perfectly globular shape at maturity.

INCA (No. 874). Most unusual formation. The flower composed of short tubular petals shaping into a globular form at its full maturity. Color is a pleasing clear yellow. Short growing habit and is ideal for container grown material.

ALASKA (No. 889) (S. G. 1960). Largest white in the early flowering class.

FAIR LADY (No. 897) (S. G. 1960). Beautiful rosy purple. Best, treated as either bush or disbudded pompons because of being a producer of small size flowers in abundance.

PRICE: 50 cents each; 3 for \$1.35; 6 for \$2.50 (one name)

Cultural Suggestions

DISBUD EXHIBITION AND SPIDER TYPES

SOIL PREPARATION. Chrysanthemum do best in a rich deeply cultivated soil. Incorporation of humus materials such as barnyard manure, decayed compost, peat moss, leaf mold, etc., is beneficial. In addition, superphosphate at the rate of 3 lbs. per 100 square feet is broadcasted and spaded to a depth of 12 to 15 inches early in spring.

EXPOSURE. The area to be planted should have good sun exposure and air circulation.

TREATMENT OF PURCHASED PLANTS. First observe the condition of the plants when received. Those showing sign of wilting or excessive dryness at the roots may be refreshed by placing the root section in a shallow pan of cool water for few hours before being set out. About 15 inches apart in all directions is a normal area of space allocation. When planted, the soil around the base is firmed and watered thoroughly. Shading from direct sunlight during first few days is helpful.

STOPPING. When the young plant has become firmly established—normally within a period of two weeks from planting date—pinch out the top. This simple operation is known as “stopping” and will bring about the formation of three or more new shoots, the subsequent handling of which must be governed by whatever plan you may have for their future disposition. In order to dwarf your plants, make them bush out, and to increase their yield or blooms it may be necessary to “stop” them a number of times, the proper number to be determined by the particular variety of plant in need of such attention and the specific result desired.

RESTRICTION OF LATERAL GROWTH. A plant, when allowed to retain no more than one, two or three stems, will develop much larger blooms than it will if permitted to grow without restriction. This is especially true of the large flowering type—exhibitions, commercials, spidery sorts and some of the larger anemones.

DISBUDDING. All lateral branches appearing at leaf axils are removed at regular intervals of about 10 days apart. Many exhibition varieties will produce, “first crown buds” or “leaf buds,” as commonly known in July which are usually removed and the next central buds retained.

FERTILIZING. About 3 applications of complete balanced fertilizer, such as “Vigoro,” etc., at the rate of 3 lbs. per 100 square feet would be sufficient. No feeding is done after buds begin to show color.

CONTROL MEASURES FOR INSECTS AND DISEASES

INSECTS:

1. Leaf tyer. A brown moth emerges at night and lays white eggs which hatch into white caterpillars, but later change into a green color. Control: DDT.
2. Aphids, leaf miner, and red spider. Controlled with sprays such as Malathion, etc.
3. Thrips. Control: DDT.
4. Mealy bugs. Control: White oil emulsion sprays.
5. Tarnished plant bug. A yellowish brown bug with long probosci used to puncture young shoots. Control: Handpicking or DDT.
6. Grasshoppers. Control: Dusting with arsenical compounds.
7. Cutworms. Control: DDT.
8. Slugs, snails, sowbugs and milipeds. Control: Baits.

DISEASES:

1. Rust. Indicated by blisters and exposes dark brown powder—a mass of spores. Infested leaves should be removed and burned. Control: Fermate.
2. Mildew. It has white powdery appearance. Control: Sulphur dust or sprays.

STAKING. Individual stem should be supported with stake or other means to hold the blooms upright.

CULTURAL SUGGESTIONS

BUSH OR GARDEN VARIETIES. Under this heading comes small pompons, small anemones, singles and Hardy Garden varieties. These varieties are most effective in the garden when grown low with as much growth as possible. This effect is easily obtained by pinching off centers of all laterals three or four times up to 1st or 10th of August. This method will prevent plants from toppling too freely.

PRINCESS ANNE (Cat. No. 960). Beautiful shade of Salmon pink.

BRONZE PRINCESS ANNE (Cat. No. 940). Buff bronze sport of “Princess Anne.”

GOLDEN PRINCESS ANNE (Cat. No. 951). Rich golden yellow sport of “Princess Anne.”

These British import of special merit in dahlia-flowered type is rapidly ranking Nation's No. 1 potted Mum materials for year around marketing by commercial growers. Normal maturing date with us in around October 25. Price: 50 cents each; 3 for \$1.35.
